

I noticed devi never released a PCB for this and I really wanted to build one so I just made a PCB. This thing is awesome. Input is wired to lug 2 of the GAIN pot. Output is from lug 2 of the VOLUME pot. If you have experience you might notice all pots are wired in an unusual way. Don't correct it. We want to keep this thing as authentically shitty as possible. When you are finished you can wrap the PCB in a wad of electrical tape lol. LED resistor labeled RLED can be anything from 2K to 6K depending on desired brightness. 4K7 always works for 5mm red LED.

#### CLONE OF LEGEND OF FUZZ BILL OF MATERIALS

6	100nF	polyester film capacitor	box
4	10K	resistor	
1	1K	resistor	
2	2M2	resistor	
1	3M3	resistor	
2	100KB	potentiometer	
1	2N2222A	NPN transistor	
1	2N2907	PNP transistor	
4	MPSA18	darlington NPN transistor
